Introduction

Tobii Dynavox Windows Control is a software solution for controlling Windows applications using gaze with Tobii Dynavox eye trackers.

System Requirements

- Windows 7, 8.1, or 10
- .NET Framework 4.5

Customer support: For more information or support, please visit www.TobiiDynavox.com.

Release Version 2.0.2

Release date: 2017-10–16

New Features

- Added basic statistics recording (TGP-594)
- Added Korean keyboard and word prediction (TGP-1524)
- Added Sticky Move Cursor, Sticky Drag & Drop, Sticky Right Click and Sticky Double Click tasks (TGP-1981)
- Added a video option to use as a stimuli for Easy calibration (TGP-2360)
- Added video calibration stimuli samples (TGP-2483)
- Added a notification to inform users when Windows Eye Control is running at the same time with Windows Control (TGP-2484)

Improvements

- Made it possible to cancel out Display Setup and Calibration notifications (TGP-1467)
- Updated the Track Status visual design (TGP-1560)
- Fixed a bug where eye trackable regions had memory leak problems (TGP-1572)
- Made it possible to switch back to the previously selected calibration profile for the first 15 seconds while a new one is selected (TGP-1897)
- Fixed a bug where in some cases Windows Control keyboard was shown behind the Windows Control taskbar (TGP-1977)
- Made notification windows visible on top of Windows Control Settings (TGP-2135)
- Fixed a bug where a tertiary selection region remained on the previous screen after changing the eye trackable display (TGP-2141)
- Fixed a bug where the Windows Control taskbar didn't change a side when Charms were shown by Shortcuts in Windows 8 (TGP-2159)
- Fixed a bug where eye trackable regions were inconsistently cropped when they were covered by windows (TGP-2199)
- Fixed a bug where the eyes in the Windows Control taskbar didn't disappear when they weren't detected by the eye tracker (TGP-2223)
- Fixed a bug where showing tertiary selection regions using mouse would ignore "Show Additional Tasks" setting (TGP-2233)
- Fixed a bug where the eyes in the Windows Control taskbar and in the Track Status didn't disappear when the eye tracker was disconnected (TGP-2235)
- Changed the time limit for diagnostics information to be collected only for the last month period (TGP-2397)

- Made it possible to set the bracket configuration in Display Setup notification window for relevant eye trackers (TGP-2449)
- Fixed a bug where the mounting mode wasn't updated in Windows Control Settings when the eye tracker was disconnected (TGP-2450)
- Updated EyeMobile Plus configuration measurements for the predefined screen planes (TGP-2451)
- Updated the tutorial with additional information about Sticky tasks (TGP-1981)
- Fixed a bug where continuous activations of eye trackable region didn't re-evaluate its visible bounds (TGP-2497)
- Improved the Windows Control performance by reducing the amount of WMI queries (TGP-2455)
- Fixed a bug where Tobii Eye Tracking Core continuously showed its context menu while Eye Assist Engine was running at the same time (TGP-2501)
- Fixed a bug where the scroll marker was shown on a wrong screen in cases when the primary monitor wasn't set as eye trackable (TGP-2504)
- Made it possible to step through Easy calibration using mouse clicks or by tapping on the screen on touch devices (TGP-2508)
- Changed the maximum timeout to 10 seconds for clients to register to Eye Assist Engine (TGP-2515)
- Fixed a bug where Windows Control Settings were shown in-between calibration and test calibration windows (TGP-2516)
- Added localization of the new text (TGP-2519)
- Made it possible to close the Windows Control keyboard using Enter key when it is shown in Name Profile window in calibration process (TGP-2522)
- Fixed a bug where eye trackable regions were shown behind notification windows (TGP-2524)
- Fixed a bug where clicking Esc keyboard key in Name Profile window in calibration process would close the calibration but not the Windows Control keyboard (TGP-2539)
- Updated the way of how the Windows Control keyboard state is detected (TGP-2540)
- Fixed a bug where calibration process crashed when the eye tracker was disconnected (TGP-2546)
- Fixed a bug where Virtual Remote Drivers application didn't detect its previous installation (TGP-2562)
- Fixed a bug where changing "Limit Eye Gaze buttons only to Tobii Dynavox applications" setting would disable eye trackable region activations (TGP-2573)
- Fixed a bug where tertiary selection region wasn't positioned properly (TGP-2616)
- Fixed a bug where Windows Control crashed after docking the computer in sleep mode and then waking it up (TGP-2525)
- Updated the bundled version of Virtual Remote to 1.0.4 (TGP-2608)
- Updated the bundled version of Update Notifier to 1.5.3 (TGP-2557)
- Updated the bundled version of Tobii Eye Tracking Core to 2.10.20 (TGP-2608)

Release Version 2.0.1

Release date: 2017-07–10

New Features

- Support for EyeMobile Plus (TGP-2084, TGP-2373)

Improvements

- Installers installed by the Windows Control bundle can now be repaired through Windows (TGP-1666)
- Made it possible to switch to sticky left click using mouse (TGP-1929)
- Corrected Windows Control Configuration Guide welcome page button's font (TGP-2032)
- Fixed inconsistent highlighting in the manage profile view in Settings (TGP-2099)
- Fixed a bug where the incorrect calibration type was shown if the serial number of the eye tracker could not be retrieved (TGP-2113, TGP-2210)
- Improved look and feel of the track status window in it's smallest size (TGP-2146)
