

# Boardmaker Studio Network Installation Guide

## Deployment Across Multiple Machines (Push Installs)

This article is intended for Network Administrators deploying Boardmaker Studio across multiple Windows computers. It assumes that your Network Administrator is knowledgeable about how to perform these types of installations, has their preferred deployment software chosen, and is familiar with its use. Tobii Dynavox does not directly support these installs beyond providing the below information.

### Deploying Boardmaker Studio

All necessary dependencies are included in the BoardmakerStudioSetup.exe installer file. There is no need to extract any files or build any special deployment packages. The .MSI is not needed for Push and Silent installs, and it is not recommended for initial installation of the Boardmaker Studio software as it does not contain all the necessary dependencies needed for initial installation of the software.

### Obtaining your copy of Boardmaker Studio

You can obtain a copy of the .exe file here:

[https://download.mytobiidynavox.com/BoardmakerStudio/BoardmakerStudio\\_EN.Installer.exe](https://download.mytobiidynavox.com/BoardmakerStudio/BoardmakerStudio_EN.Installer.exe)

### Command Line Options

Use the `/i` command when doing remote installation.

`/passive` option shows installation progress but runs unattended

`/quiet` option shows nothing and installs entirely in the background

`COUNTRYID=?` Adjusts settings and content installed for your area. Valid values:

1 = EN-US

2 = EN-CA

3 = EN-UK

4 = EN-AU

5 = EN-NZ

For example: `boardmakerstudiosetup.exe /i /quiet COUNTRYID=1`

The above does a silent installation of Boardmaker Studio US English for Windows.
